

université PARIS-SACLAY

BDAP

- » The Database for Planetary Atmospheres (BDAP) contains most of the data received from IPSL experiments taking place in space or on the ground, related to planetary exploration.
- » In recent years, BDAP's activities have focused mainly on the establishment of the Virtual Observatory for Planetology as part of the International Planetary Data Alliance (IPDA).

OSU: OVSQ

Status: Observation Service not labelled by INSU/ASTRO (SO6)

Laboratory in charge: LATMOS

Scientific Manager: Alain Sarkissian (Alain.Sarkissian@latmos.ipsl.fr)
