

université PARIS-SACLAY

PARTNERSHIPS

OVSQ has established a solid network of industrial, regional and university partners which ensures the relevance and applicability of its educational program to public life.

- » The contributions of partners can take different forms such as participation in conferences, offering internships to students to enable them to apply the skills acquired in a practical context or a financial contribution to the university to improve teaching facilities, training programmes and to support initiatives to help students as they set out in their careers.
- » This network of partnerships offers several advantages to the different participants.

For OVSQ

- » The participation of industrial and regional partners allows OVSQ to consistently improve the quality of its education programmes and thus ensure their relevance to the needs of the market.
- » Financial contributions from its partners allow OVSQ to purchase hardware and software to ensure that the programme remains at the forefront of education on sustainable development.

For the partners

- » Partners can recruit young graduates specialising in the field and so are able to keep up to date with the latest advances in sustainable development, an area that is becoming increasingly vital for the survival and progress of businesses and society.
- » Establishing a partnership with OVSQ shows a commitment to sustainable development, an increasingly important factor, both for compliance with regulations and for the image of the company.
- » Graduates from OVSQ education programmes become managers, consultants and actors with expertise in the field of climate change, environmental management and sustainable development. They make a real difference enabling companies and public authorities to make informed choices and decisions in their policies.

For the students

- » Internships proposed by partners offer students the opportunity to hone the skills and tools learned during their training by applying them to specific projects and in different contexts.
- » Improving the facilities exposes students to best practices in the field of sustainability.
- » Job opportunities are created for students through interaction with potential employers.
